

MOULAY ALI SAKURAI EL IDRISSE

Minato, Tokyo, Japan | +44 7355 618422 | myali.sakurai.elidrissi@gmail.com | [LinkedIn](#) | [Github](#) | [Portfolio](#)

SUMMARY

Systems engineering student with a Cyber-Security background. Interested in applied ML systems, low-level algorithms and HPC.

EDUCATION

Georgia Institute of Technology

M.S. in Computer Science - specialization in Computing Systems

Oct 2026 - Jun 2028

Atlanta, USA

42 Tokyo

Software engineering

- **Achievements:** 1st place in the entrance exam(Piscine)

Sep 2025 - Present

Tokyo, Japan

Nottingham Trent University

Bachelor's, CyberSecurity (GPA: 1st Class Honours)

Sep 2022 - May 2025

Nottingham, UK

- **Achievements:** Department of Computer Science Project Prize in BSc (Hons) Cyber Security

PROFESSIONAL EXPERIENCE

Dassault Systèmes | AI/ML Engineer

Aug 2026 - Present

- Building internal AI tools and proof-of-concept applications on in-house LLMs, integrating 6+ internal data sources for knowledge search on company platform.
- Developing MCP servers connecting internal tools and data to LLM agents as part of an international AI platform team.
- Training and deploying open-weight models on in-house servers for internal research and development.

Stealth Startup | Backend & ML Engineer

May 2026 - Present

- Trained a machine-learning model that predicts property prices from Japanese market data, reducing pricing errors by roughly 15% versus prior estimates and giving clients more reliable figures to guide investment decisions.
- Built Python scraping pipelines collecting rental listings from Japanese platforms and served them through a secured FastAPI REST API, enabling real-time access to current rental data for downstream analytics.

DIGITAL GRID Corporation | Backend Engineer

Feb 2026 - Apr 2026

- Built an enterprise conversational AI system (LangGraph) with hybrid vector search and knowledge-graph retrieval, improving answer accuracy ~20% on automated benchmarks.
- Hardened the backend (JWT auth, RBAC, input sanitisation) and cut database query overhead ~95% on tenant-isolated services, all deployed via a Dockerised Prometheus/Grafana pipeline.

PUBLICATIONS & MANUSCRIPTS

- El Idrissi, M. A., Otuka, R., Nwajana, A. O. "Quantifying Layered Security Overhead in Explainable Machine Learning Fraud Detection Systems." In Secure Software Engineering in AI and Cloud Native Architectures, eds. A. Mittal & E. De La Cruz. IGI Global Scientific Publishing, forthcoming 2027. Chapter under review..

PROJECTS & OUTSIDE EXPERIENCE

Options Pricing Engine in C++ | [GitHub](#) | github.com/sakemyali/options-pricing

- Implemented Black-Scholes analytical pricing and Monte Carlo simulation for European call/put options, validating numerical convergence against closed-form solutions.
- Wrote Python trading algorithms against a live order-book simulator: market making, statistical and index arbitrage, and Black-Scholes option pricing under position limits.

DorAlmon | [GitHub](#)

- Built a real-time desktop assistant orchestrating four Mistral models in parallel, Pixtral-12B for on-screen OCR and vision, Ministral-3B for intent classification, Codestral for code help, and Mistral Large for translation, streaming screen context to the UI over WebSocket.
- Ran three concurrent inference pipelines (OCR, scene analysis, intent) into an agent router with a 6-gate throttling system that decides when to surface help, plus multilingual voice narration through ElevenLabs.

Minishell | [GitHub](#)

- Built a Bash-like shell that runs each command in its own process and connects them with pipes.
- Implemented redirections, here-documents, quoting, variable expansion, seven built-in commands, and faithful signal handling.

TECHNICAL SKILLS

- **Languages:** C, C++, Python, TypeScript
- **Framework & Tools:** Django, LangChain, LangGraph, Docker, Git, FastAPI, Scikit-learn, Grafana
- **Cloud & Data:** AWS, PostgreSQL, ChromaDB, Rest APIs
- **AI/ML & Others:** Retrieval-Augmented Generation, Generative AI, Vector Databases, Prometheus, Loki, Agile, API Security
